Services Provided:

- Organisation of air and ground surveying – assess client's existing geospatial and building data, provide suitable specification for new data capture requirements and seek competitive quotations
- Accurate 3D computer modelling – both above and below ground
- 3D VR city modelling and simulation environment developed as an urban planning system
- 3D Development Application (DA) models for visual assessment
- 3D Master Plan modelling for planning assessment and public consultation
- 3D VR Transportation modelling for rail and motorway concept analysis and public consultation
- Computer analyses – 4D, solar, volumetric and clash detection

All project data can be added to an existing asset and/or spatial data base. This data can be updated or reused at any time.

DD3d provides visualisation materials for use in reports, presentations, ministerials, local government approvals, marketing and public consultation processes including:

- Digital video animations
- 3D rendered perspectives (print and screen quality)

Costs

Dd3D Works offer a range of rates and fixed prices to suit your budget and project. Call us to discuss your project and arrange a free quotation.
